IV.Long answer based questions

Q.How do you classify ocean movements?

Ans.The movements that occur in oceans can be broadly categorized as waves, tides and currents.

1.Waves: When the water on the surface of the ocean rises and falls alternately, they are called waves. During a storm, winds blowing at a very high speed form huge waves and may cause tremendous destruction.

2.Tide: The rhythmic rise and fall of ocean water twice a day is called a tide. It is a high tide when water covers much of the shore by rising to its highest level. It is a low tide when water falls to its lowest level and recedes from the shore.

3.Ocean currents: Ocean Currents are streams of water flowing constantly on the ocean surface in definite directions which may be warm or cold ocean currents. The warm ocean currents originates near the equator and move towards the poles. Whereas the cold ocean currents carry water from polar or higher latitudes to tropical or lower latitudes.

V.Read the source given below and answer the following questions.

A massive earthquake measuring 6.9 on richter scale hit Bhuj town on 26th January 2001. Atleast 971 students and 31 teachers are feared to have lost their lives following the collapse of school building.
