| 1 | The feasible solution for an LPP is shown in Figure. Let $Z=3 x-4 y$ be the objective function. Minimum of Z occurs at <br> 1. $(0,8)$ <br> 2. $(0,0)$ <br> 3. $(5,0)$ <br> 4. $(4,10)$ |
| 2 | Corner points of the feasible region for an LPP are ( 0,2 ), (3, $0),(6,0),(6,8)$ and $(0,5)$. Let $F=4 x+6 y$ be the objective function. Maximum of $F-$ Minimum of $F=$ <br> 1. 60 <br> 2. 48 <br> 3. 42 <br> 4. 18 |
| 3 | A cottage industry manufactures pedestal lamps and wooden shades, each requiring the use of a grinding/cutting machine and a sprayer. It takes 2 hours on grinding/cutting machine and 3 hours on the sprayer to manufacture a pedestal lamp. It takes 1 hour on the grinding/cutting machine and 2 hours on the sprayer to manufacture a shade. On any day, the sprayer is available for at the most 20 hours and the grinding/cutting machine for at the most 12 hours. The profit forms the sale of a lamp is Rs 5 and that from a shade is Rs 3. <br> Convert the given statement into constraints and objective function |
| 4 | Determine the maximum value of $Z=11 \mathrm{x}+7 \mathrm{y}$ subject to the constraints: $2 x+y \leqslant 6, x \leqslant 2, x \geqslant 0, y \geqslant 0 .$ <br> Or <br> Determine graphically the minimum value of the objective function $Z=-50 x+20 y$ subject to the constraints: $2 x-y \geq-5, \quad 3 x+y \geq 3, \quad 2 x-3 y \leq 12, \quad x \geq 0, y \geq 0$ |
| 5 | Solve the Linear Programming Problem graphically: Minimise $Z=x+2 y$ subject to $2 x+y \geq 3, x+2 y \geq 6, x, y \geq 0$. |

| 6 | Show that the minimum of Z occurs at more than two points. <br> Minimise and Maximise $\mathrm{Z}=\mathrm{x}+2 \mathrm{y}$ subject to $x+2 y \geq$ <br> $100,2 x-y \leq 0,2 x+y \leq 200, x, y \geq 0$. |

| 7 | A merchant plans to sell two types of personal computers - a <br> desktop model and a portable model that will cost Rs 25000 <br> and Rs 40000 respectively. He estimates that the total <br> monthly demand of computers will not exceed 250 units. <br> Determine the number of units of each type of computers <br> which the merchant should stock to get maximum profit if he <br> does not want to invest more than Rs 70 lakhs and if his profit <br> on the desktop model is Rs 4500 and on portable model is Rs <br> 5000 . By using LPP |
